DETAILED ACTION

Election/Restrictions

1. Newly submitted claims 26 and 31 directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: the invention requires a q-axis command current calculating unit that is distinct being that the unit requires substituting a rotation angle, an angular velocity, an emf, a current and a torque into an equation, and controlling the motor based on the calculated q-axis command I_{qref} . The original invention does not require the equation. The restriction requirement is therefor necessitated and deemed proper.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 26 and 31 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 20-25, 27-30 are rejected under 35 U.S.C. 102(b) as being anticipated by Sakamaki (US6504336).

Claim 20: a motor control device comprising a current detector (41); and a current control unit (69) that controls phase current of the motor on the basis of the command values and detected phase currents; an emf calculating unit (70); a d-q voltage calculating unit that

Art Unit: 2837

calculates voltages which are q-axis and q-axis components of an emf (col. 3:65-4:10); a q-axis command calculating unit that calculates a current command value from the voltages (col. 2:65-3:5); a d-axis command calculating unit that calculates a current command value that is a d-axis component of a current command (col. 2:65-3:5); and a unit that calculates phase current values from the current command values (col. 9:12-15).

Claim 21: a three-phase motor; phase current command values are calculated according to a constant depending on the current command values and a rotation angle (col. 9:12-49).

Claim 22: integral control (col. 8:17-24).

Claim 23: a brushless dc motor (col. 1:13-18).

Claims 24,25: a rectangular wave current/voltage (fig. 4:98; col. 1:63-65, 9:12-25, pwm signals are rectangular).

Claims 27-30: a power steering apparatus (abstract; fig. 1)

Response to Arguments

2. Applicant's arguments with respect to claims 20-31 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after

Art Unit: 2837

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
